

CRM System Proposal

Customer Relationship Management System

Project Title

CRM – Customer Relationship Management System

1. Project Overview

The CRM System is a web-based application designed to help companies manage customer leads and improve communication between sales agents and customers. The system tracks the customer journey from the moment a lead enters the system until the lead becomes a customer or is marked as lost.

The platform improves organization, follow-up processes, and team performance monitoring through dashboards, reports, and task management tools.

2. Project Goal

The main goal of this project is to build a smart and organized CRM platform that helps businesses:

- Manage customer leads efficiently.
 - Assign leads to sales agents.
 - Track communication and follow-up activities.
 - Monitor employee performance.
 - Increase conversion rates.
 - Improve customer relationship management.
-

3. Problem Statement

Many businesses struggle with:

- Losing customer leads.
- Poor follow-up management.

- Lack of communication tracking.
- Difficulty monitoring agent performance.
- Missing deadlines and follow-up tasks.

This CRM system solves these problems by centralizing all lead and customer management processes into one organized platform.

4. Target Users

Admin

The admin manages the whole system and monitors all operations.

Responsibilities:

- Assign leads to agents.
- Track lead progress.
- Monitor delayed tasks.
- View reports and analytics.
- Monitor team performance.

Agent

Sales agents interact directly with leads.

Responsibilities:

- Contact leads.
 - Update lead status.
 - Add follow-up notes.
 - Schedule tasks and meetings.
-

5. System Workflow

1. A new lead enters the system.
2. The lead is assigned to a sales agent.
3. The agent contacts the lead.
4. A follow-up task is scheduled.
5. The lead status is updated.
6. The lead becomes:

- Converted (Won)
 - Lost (Closed)
-

6. Core Features

Lead Management

- Add, edit, and delete leads.
- View lead details.
- Search and filter leads.

Agent Assignment

- Assign leads to specific agents.
- Track assigned leads.

Follow-Up Management

- Schedule tasks and reminders.
- Monitor overdue tasks.

Lead Status Tracking

Lead statuses include:

- New
- Contacted
- Follow-Up
- Qualified
- Converted
- Lost

Reports & Analytics

- Conversion rate reports.
- Agent performance reports.
- Open and delayed leads reports.

Notifications System

- Alerts for overdue tasks.
- Notifications for new assigned leads.

7. Required Pages

- Login Page
- Dashboard
- Leads Management Page
- Lead Details Page
- Agent Management Page
- Tasks & Follow-Ups Page
- Reports & Analytics Page
- Notifications Page
- Profile & Settings Page

8. Technologies Used

Frontend

- React.js
- Tailwind CSS

Backend

- Node.js
- Express.js

Database

- MongoDB

Additional Tools

- JWT Authentication
- REST API
- Chart Libraries for analytics

9. Expected Outcomes

After completing the project, the system will:

- Improve lead organization.
 - Reduce missed follow-ups.
 - Increase sales conversion rates.
 - Improve team productivity.
 - Provide clear business insights through reports and analytics.
-

10. Future Improvements

Possible future features:

- Email integration.
 - WhatsApp notifications.
 - AI-powered lead scoring.
 - Mobile application support.
 - Real-time chat system.
-

11. Conclusion

The CRM System is a powerful solution for businesses that want to manage customer relationships professionally and improve sales performance. The project combines lead management, task scheduling, analytics, and performance tracking in one modern platform.
